Slim 4 Life Weight Loss

Exhibit B: Summarization of Results of Verification Performed on November 25, 2015

Slim 4 Life retained our company to verify weight loss results. We randomly selected 100 files from a cross section of files to verify program results and to compute average weight loss.

The following summarization was prepared based on the information located in Exhibit A.

Clients were male and female and actively participating in the program in either the weight loss phase, stabilization phase, or maintenance phase. They were both medical and non-medical clients, ages 18-72.

The clients our staff randomly selected for verification were from various locations in the Dallas/Ft Worth area in different phases of the program.

The total number of weeks completed for those clients selected for testing was 1,129 for an average of 11.29 weeks per client.

For those clients selected for verification:

- accumulated weight loss totaled 3,854 lbs for an average of 38.54 lbs per client.
- average weight loss per week was 3.91 lbs.

12/1/15

We did a complete random audit of Slim4Life client files to compute average weight loss. The accompanying spread sheet using the data from 100 random client files chosen to audit reports the following facts:

On a 4 week program the average weight loss was 18.1 lbs or 4.5 lbs per week.

On an 8 week program the average weight loss was 28.7 lbs or 3.6 lbs per week.

The total loss to date by those clients ranged from 20 lbs to 206.8 lbs.

The total loss to date by those 100 clients = 4,466 lbs for an average of 44.7 lbs per client.

These facts were compiled from the data recorded in the individual client files.
